

Self-Aligning Clips & Quick Clips

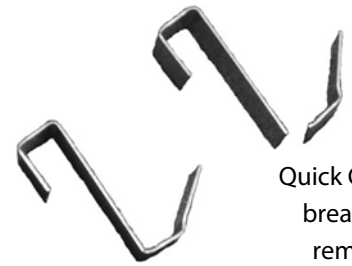

Aligning Clips

Aligning clips are designed for use with all makes of 5/16" cement fiber square edge and hardboard siding that requires a 1-1/4" overlap. The clips can significantly reduce installation time, and effectively reduce the number of workers required to install the siding, resulting in overall job cost savings. Each clip gauges the 1-1/4" set, while providing a shelf for the next lap to rest on while nailing. Aligning Clips are manufactured using G-90 galvanized steel, prime coated for easy painting. Once installed and painted, the small portion of the clip that is left exposed is virtually invisible. No part of the clip covers the exposed face of the siding.

The Aligning Clips are only available in square edge.

The Quick Clip, an improved version of the Aligning Clip, offers even easier installation with no visible shelf remaining after installation. The Quick Clips are available for either square edge or angled drip edge siding. The breakaway portion of the clip is removed with three or four quick up and down bending motions. Once the breakaway portion is removed, there is no visible shelf remaining. Since no visible part remains, the Quick Clip is ideal for prefinished siding applications.

Quick Clips

Quick Clip with breakaway removed

Please specify Straight Edge or Angled Drip Edge when ordering Quick Clips.

Specifications

| Style | S/A Clips | Quick Clips |
|------------------------|--|---|
| Material | 24 gauge G-90 galvanized steel, primed on both sides | |
