

140 Series Profiled Joint Covers

4-12

140 Series Profiled Joint Covers are intended for use with hardboard siding that is profiled, typically to look like 2, 3, or 4 smaller boards when installed. The Joint Covers protect the butt joint where two siding planks meet and provide an expansion joint to help prevent siding buckling. A wraparound lower lip hooks the siding and requires one nail to hold it in place. They are manufactured with either a smooth or wood grained texture and are available to fit all major brands 12" and 16" profiled shapes.

140 Series Joint Covers

Please specify profile number and siding to insure you get the correct profiled part. *Profiles vary by manufacturer.*
