

Retrofit Joint Covers

141 Series Rolled Edge Retrofit Joint Covers

Retrofit Joint Covers are manufactured for application after siding installation has been completed and the seams open up, or the siding was installed with too large of a gap at the seam to be covered by the regular joint covers. Retrofit joint covers do not have the rib on the back, so they are more flexible and will need fastening to keep the part in place. These joint covers are wider than the regular parts. Retrofit joint covers are stocked in a limited range of sizes and styles (see chart below), but can be produced in a wide variety of styles, widths, finishes, and lengths. Please contact the factory with your particular application for help specifying the best solution.

142 Series Flat Edge Retrofit Joint Covers

141 Rolled Edge Retrofit Joint Covers are manufactured with a rolled edge for extra sturdiness, while holding the same face

width as a regular joint cover.

142 Flat Edge Retrofit Joint Covers are manufactured with flat edges that allow for a little more coverage for the gaps and are wider (1") for increased coverage.

143 Extra Wide Retrofit Joint Covers are manufactured 1½" wide to cover extra large gaps
